PUGSLEY, A. G., An Elastic Limit to Branch Extension 491

Index to Volume 125

Animals, discrete systems, cell-cell interactions and color pattern; clonal theory and cellular automata, 437
Animals, discrete systems, cell-cell interactions and color pattern; conflicting dynamics and pattern formation, 419
Annuals and perennials, competition between; population dynamics and plant community structure, 475
ARMSTRONG, R. A., A patch model of mutualism (letter), 243
Axial-view recording: an approach to assess the third dimension of the ciliary cycle, 67

BARACH, J. P., The effect of ohmic return currents on biomagnetic fields, 187
BARTON, N. H. and ROUHANI, S., The frequency of shifts between alternative equilibria, 397
BATES, D. A. (see BATES, J. H. T.), 237
BATES, J. H. T., BATES, D. A. and MACKILLOP, W., On the difficulties of fitting the double Michaelis-Menten equation to kinetic data, 237
Behaviour, cellular, biphasic responses and quantal signals, 41
BENIGNI, R. and GIULIANI, A., The conceptual framework of monitoring mutagens/carcinogens: a critical appraisal, 465
Biomagnetic fields, the effect of ohmic return currents on, 187
Biphasic responses, quantal signals and cellular behaviour, 41
Bird migration, partial, and evolutionarily stable strategies, 351
BLOMBERG, C. (see VON HEIJNE, G.), 1
BONILLA, M. (see GARIGLIO, P.), 83
BORSTNIK, B., PUMPERNIK, D. and HOFACKER, G. L., Point mutations as an optimal search process in biological evolution, 249
Brain window language of fireflies, 93
Branch extension, an elastic limit to, 491
Breathing in the cat, spatio-temporal characterization of intercostal activity during, 125
BRENDEL, V. and SEGEL, L. A., On modes of recombination, replication, and segregation of the higher plant mitochondrial genome, 163
BRITTON, N. F. and WHEALS, A. E., Mathematical models for a G_0 phase in *Saccharomyces cerevisiae*, 269

CALOW, P. (see SIBLY, R.), 177
Carcinogens/mutagens, the conceptual framework of monitoring; a critical appraisal, 465
CARLSON, A. D. (see SOUČEK, B.), 93
Cat, spatio-temporal characterization of intercostal activity during breathing in, 125
Cell cycle, on the vibrational mode of an eukaryotic cell during (letter), 117
Cell-cell interactions, discrete systems and color pattern of animals; clonal theory and cellular automata, 437
Cell-cell interactions, discrete systems and color patterns of animals; conflicting dynamics and pattern formation, 419
Cellular behaviour, biphasic responses and quantal signals, 41
Cells, immobilized, growing, mass transfer limitations in gel beads containing, 325
CFA absorption from the rumen, on solving the fully-interchanging *N*-compartment model in steady-state tracer kinetic studies with reference to, 193
Charged membrane, ion-penetrable, surface potential of (letter), 367
Chemical contract pressure model for phyllotaxis—application to phyllotaxis changes in seedlings and to anomalous phyllotaxis systems, 141

Ciliary cycle, axial-view recording, an approach to assess the third dimension of, 67
CLARK, R. A. (see DICKINS, D. W.), 301
Clonal theory and cellular automata; discrete systems, cell-cell interactions and color pattern of animals, 437
c-myc gene expression, human, post-transcriptional regulation involving double-stranded RNA processing, a theoretical model for, 83
COCHO, G., PÉREZ-PASCUAL, R. and RIUS, J. L., Discrete systems, cell-cell interactions and color patterns of animals I. Conflicting dynamics and pattern formation, 419
COCHO, G., PÉREZ-PASCUAL, R., RIUS, J. L. and SOTO, F., Discrete systems, cell-cell interactions and color patterns of animals II. Clonal theory and cellular automata, 437
Color pattern, discrete systems and cell-cell interactions of animals; clonal theory and cellular automata, 437
Color pattern, discrete systems and cell-cell interactions of animals; conflicting dynamics and pattern formation, 419
Communication channel, sex, intra-specific competition in; a selective force in the evolution of moth pheromones?, 15
Competition between annuals and perennials; population dynamics and plant community structure, 475
Competition equations, Lotka-Volterra, and dynamic game theory, the relationship between, 121
Competition, intra-specific, in the sex communication channel: a selective force in the evolution of moth pheromones?, 15
CORNISH-BOWDEN, A., Dominance is not inevitable, 333
CRAWLEY, M. J. and MAY, R. M., Population dynamics and plant community structure: competition between annuals and perennials, 475
Cuckoos and their hosts, a model to explore the rate of spread of mimicry and rejection in hypothetical populations of, 283
Current-distance relations for electrically stimulated fibers, ways to approximate, 339
Currents, return, ohmic, effect on biomagnetic fields, 187
Cycle, cell, on the vibrational mode of an eukaryotic cell during (letter), 117
Cycle, ciliary, axial-view recording, an approach to assess the third dimension of, 67

DE, S., On the vibrational mode of an eukaryotic cell during the cell cycle (letter), 117
DEL ANGEL, R. (see GARIGLIO, P.), 83
DHANOA, M. S. (see FRANCE, J.), 193
DICKINS, D. W. and CLARK, R. A., Games theory and siblicide in the kittiwake gull, *Rissa tridactyla*, 301
Dominance is not inevitable, 333
DUSSERT, C., RASIGNI, M., PALMARI, J., RASIGNI, G., LLEBARIA, A. and MARTY, F., Minimal spanning tree analysis of biological structures, 317
Dynamics, entry-exit, stability, effects of prey refuges with, 449
Dynamics, population, and plant community structures; competition between annuals and perennials, 475

Ecological compensation—a complication for testing life-history theory, 177
Elastic limit to branch extension, 491
Electrically stimulated fibers, ways to approximate current-distance relations for, 339
Energy advantage of counter-current oxygen transfer in fish gills, 307
Equilibria, alternative, the frequency of shifts between, 397
Eukaryotic cell during the cell cycle, on the vibrational mode of (letter), 117
Evolution, biological, point mutations as an optimal search process in, 249
Evolution of moth pheromones, a selective force in?; intra-specific competition in the sex communication channel, 15

Evolutionary conflict over the control of offspring sex ratio, 25
Evolutionarily stable strategies, and partial bird migration, 351

Fibers, electrically stimulated, ways to approximate current-distance relations for, 339
Fields, biomagnetic, the effect of ohmic return currents on, 187
Fireflies, brain window language of, 93
Fish gills, energy advantage of counter-current oxygen transfer in, 307
FRANCE, J., GILL, M., DHANOA, M. S. and SIDDONS, R. C., On solving the fully-interchanging *N*-compartment model in steady-state tracer kinetic studies with reference to CFA absorption from the rumen, 193
Frequency of shifts between alternative equilibria, 397
Fully-interchanging *N*-compartment model in steady-state tracer kinetic studies, with reference to CFA absorption from the rumen, 193

G_0 phase in *Saccharomyces cerevisiae*, mathematical models for, 269
Game theory, dynamic, and the Lotka-Volterra competition equations, the relationship between (letter), 121
Games theory and siblicide in the kittiwake gull, *Rissa tridactyla*, 301
GARIGLIO, P., DEL ANGEL, R., HERRERA, A. and BONILLA, M., Theoretical model for the post-transcriptional regulation of the human c-myc gene expression, involving double-stranded RNA processing, 83
Gel beads containing growing immobilized cells, mass transfer limitations in, 325
Gene, c-myc, human, expression, post-transcriptional regulation involving double-stranded RNA processing, a theoretical model for, 83
Genes for post-mating reproductive isolation by natural selection, a model for the spread of, 105
Genome, mitochondrial, higher plant, on modes of recombination, replication and segregation of, 163
GILL, M. (see FRANCE, J.), 193
Gills, fish, energy advantage of counter-current oxygen transfer in, 307
